

# Photovoltaic Isolators

# What is Photovoltaic?

pho·to·vol·ta·ic adj.

- A system capable of producing a voltage when exposed to radiant energy, especially light.

# What does a PV system look like?

Solar Array

PV Inverter

Meter

## Components of a PV System

Protection

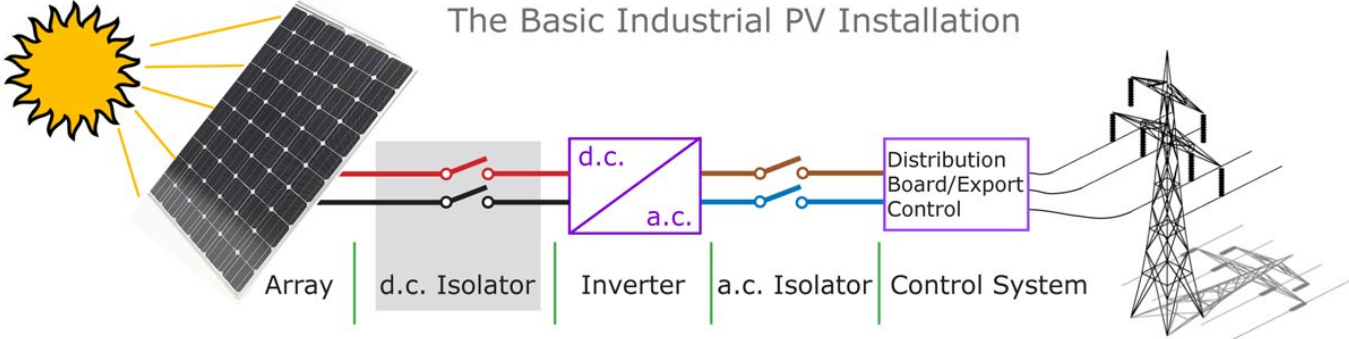

Cable & Connectors

Isolation Devices

# How do C&D isolators fit into PV systems?

# How does this all fit into a building?

# Where are C&D PV isolators being fitted?

Local to the array....  
In the loft/plant room

More accessible position....  
Near consumer unit/switch room

# How do I select the correct PV isolator?

C&D have a number of PV switch disconnectors each with different current ratings at different voltages.

\*1 = Designed to isolate twin arrays

\*2 = Pollution Degree 2

Rating	Format	Cat. No.	Internal Switch	Rated Operational Current	Rated Operational Voltage d.c.					
					300/400V	600V	800V	1,000V	1,200V*2	1,500V*2

# Photovoltaic (PV) Isolators

To select the correct PV switch Disconnecter we first need to know the maximum voltage and current output from each solar panel.

When calculating the maximum Voltage & Current for an array the manufacturers test figures for  $V_{oc}$  &  $I_{sc}$  should be used with an appropriate safety factor.

For std mono and multi-crystalline silicon modules the minimum figures would be:-

Voltage:  $V_{oc}(stc) \times 1.15$

Current:  $I_{sc}(stc) \times 1.25$

$V_{oc}$  – Open Circuit Voltage    $I_{sc}$  – Short Circuit Current    $stc$  – Standard test conditions

# Photovoltaic (PV) Isolators

To select the correct PV switch Disconnecter we first need to know the maximum voltage and current output from each solar panel....

- Max voltage d.c. ( $V_{ocstc} \times 1.15$ ) = 30V
- Max current d.c. ( $I_{scstc} \times 1.25$ ) = 4.5A
- Power output (watts) = 135W

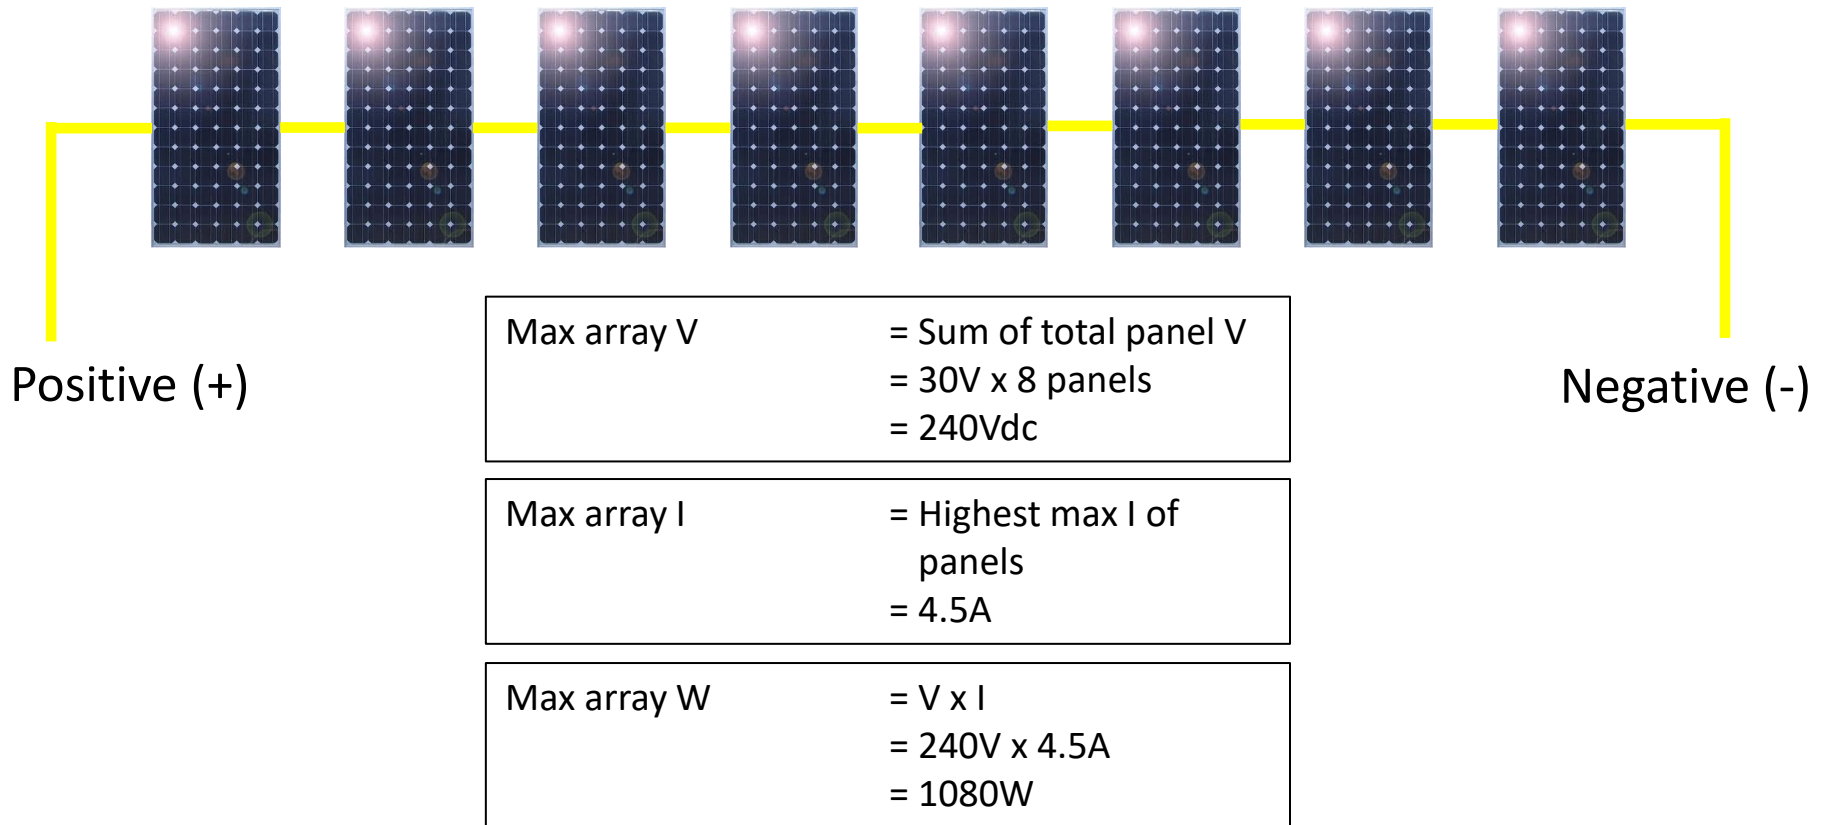

Next we need to know how the array (all of the panels together) is connected.....

# Photovoltaic (PV) Isolators

Next we need to know how the array (all of the panels together) is connected...

## Example 1 - Series

# Photovoltaic (PV) Isolators

Therefore...

EPV162 would be the correct choice

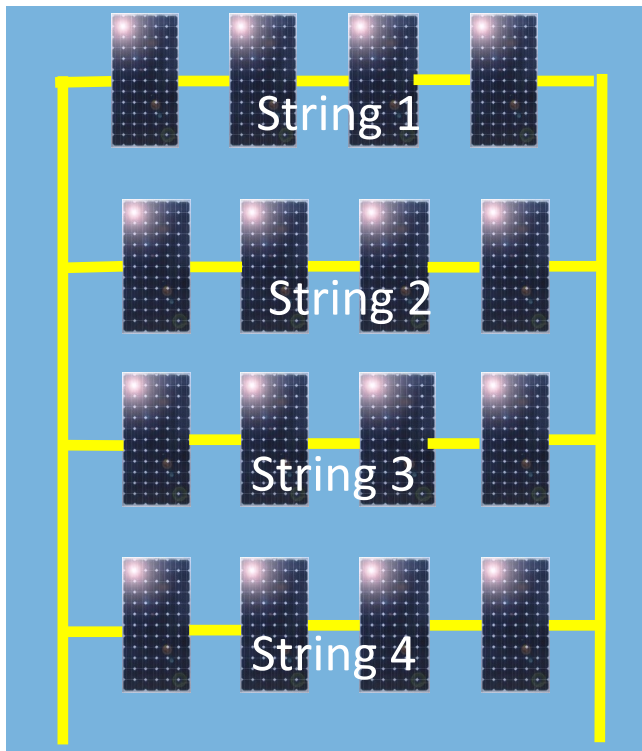

Rating	Format	Cat. No.	Internal Switch	Rated Operational Current	Rated Operational Voltage d.c.

# What are the additional features of the C&D PV range?

- IP65 moulded plastic enclosures with multiple knockouts for cable entry
- Door interlock handles and operating shafts for panel mounting applications
- Up to 3 Padlocks can lock the handle in the 'OFF' position. Standard hasp dia 6.4mm
- C&D PV isolators incorporate a mechanical interlock which when a padlock is inserted prevents the enclosure lid from being removed
