

Selector Switches

CDPD221

Issue 1

Product Introduction

Craig & Derricott's selector switches are available in four different ranges, each of which has distinct design differences and ranges of accessories.

This presents the user with a vast choice of options and the aim of the following pages is to help the user decide the best option for their precise application.

Product Features

- Ranging between 20A-125A.
- Each range has a variety of index options.
- All selector switches do not require any form of separate expensive power supply.
- Total freedom in the way contacts are made to open and close.
- Early break, late break, make-before-break and fleeting contact conditions are available for use.
